Fr m: Sent: To: Subject: Nguyen, Quang (AU1632) Monday, June 03, 2002 3:14 PM STIC-Biotech/ChemLib Sequence search request for 09/721543

Good afternoon,

Please search:

SEQ ID NO:12, 13, 14, 15 and 16 against commercial, issued and pending U.S. application databases. Should there be questions, please contact me at 308-8339 (CM1-12A12, AU 1636, my mail box is in CM1-11E12).

THANK YOU.

RECEIVED 201

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence contained an oligo-off track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-off track served to verify it as a clone from the mon-normalized embryo at 13 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

The sequence contained an oligo-dT track that was present in the oligounclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonsfide poly A tail. The sequence tag present in the CDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized fundus library cDNA Library Preparation: M.B. Soarcs Lab Genetics (www.resgen.com) The following repetitive elements were found in this CDNA sequence: 1-21, >AT_rich#Low_complexity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           //dev_stage="ADULT"

Insight into hepatocellular carcinogenesis at transcriptome level

by comparing gene expression profiles of hepatocellular carcinoma

with those of corresponding noncancerous liver

Proc. Natl. Acad. Sci. U.S.A. 98 (26), 15089-15094 (2001)

The sequence contained an oligo-dT track that was present in the oligonerlectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Noti site and the oligo-dT track served to verify it as a clone from the normalized rat brain pool library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Seq primer: M13 Forward

polyllnker; Site_1: Not I; Site_2: Eco RI: The UI-R-CO
library is a subtracted library derived from the UI-R-CO
library is a subtracted library derived from the UI-R-G
and UI-R-EI libraries. The UI-R-AI library consisted of a
mixture of individually tagged normalized libraries
constructed from rat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, and muscle. The UI-R-EI
library consisted of a mixture of individually tagged
normalized libraries constructed from 8, 12 and 18-day
embryo. The tag is a string of 3-5 nucleotides present
between the Not I site and the oligo-dr track which
allows identification of the library of origin of a clone
within the mixture. The subtracted library (UI-R-CO) was
constructed as follows: PCR amplified cDNA inserts from a
pool of UI-R-AI and UI-R-EI clones from which 3' ESTS had
been derived was used as a diriver in a hybriolization with
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Email: msoares@blue.weeg.uiowa.edu
The sequence tag present in the CDNA between the NotI site and the oligo-dr track served to identify it as a clone from the normalized adult 12-Day-Embryo library. CDNA Library Preparation: M. Fatima Bonaldo, Ph.D. Clone distribution: clones will be available through Research Genetics This clone is also available through the I.M.G.E. Consortium at LLNL (info@image.llnl.gov). IMAGE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Figure 1: msoares@blue.weeg.uiowa.edu
The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NoII site and the oligo-dT track served to verify it as a clone from the normalized ganglia library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence 7, App Sequence 13, App Sequence 13, App Sequence 4, App Sequence 4, App Sequence 4, App Sequence 4, App Sequence 3, App Sequence 4, App Sequence 6, App Sequence 1, App Sequence 2, App Sequence 3, App Sequence 3, App Sequence 3, App Sequence 4, App Sequence 4, App Sequence 4, App Sequence 5, App Sequence 6,

Sequence 4, Application US/08468066

Patent No. 575676

GENERAL INFORMATION

APPLICANT: Pasternack, Gary R.

APPLICANT: Ruhajda, Francis P.

TITLE OF INVENTION: Uncontrolled Cell Division

NUMBER OF SEQUENCES: 9

CORRESPONDENCE ADDRESS:

ADDRESSE: Banner, Birch, McKie & Beckett

STREET: 1001 G Street, N.W.

CIT: Washington, D.C.

STATE: District of Columbia

21P: 20001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 1; Length 759;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOFTWARE: Patentin Release #1.0, Version #1.25 CURRENT APPLICATION DATA:

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PECR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags to relative processed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) and its binding antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (II). (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical consorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in capponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. As564197-As594564 represent novel human diagnostic coding sequences of the invention of the printed coding sequences of the invention of the printed coding sequence data for this patent did not appear in the printed constitution of the coding sequence data for this patent did not appear in the printed constitution of the coding sequence data for this patent did not appear in the printed constitution of the coding sequences of the invention of the coding sequence data for this patent did not appear in the printed coding sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.
diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerises are also used in diagnostics as expressed sequence tags confinentifying expressed genes. (I) is useful in gene therapy techniques confinentifying expressed genes. (I) is useful in gene therapy techniques confinentifying expressed generating antibodies against it, detecting or confinence of a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and (II) and (II) are useful in medical maging of sites expressing (II). (II) and (II) are useful in medical confiscers involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasometric for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cand confine sequences of the invention.

Conditional sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical clasorders involving aberrant protein esquences have applications in the private of genetic disorders or other trails to assess blodiversity and to produce other types of data and products dependent on DNA and clasmostic coding sequences of the invention.

Coding sequences AAS64197-AAS94564 represent novel human DNA and clasmostic coding sequences of the invention.

Codes the sequence data for this parent did not appear in the printed specification but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the comprementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 5'-end sequence and an oligonucleotide comprises a 5'-end sequence and an oligonucleotide comprises a 5'-end polynucleotide which comprises a 1'-end sequence. Where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence. A'-end sequence and sequence and sequence and sequence at least 15 nucleotides and the combination of the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length and AHI13631 to AAHI3742 represent human cDNA sequences; AABS2446 to AAHI3632 AABS3831 represent human amino, acid sequences; and AAHI3629 to AAHI3632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Multiple gene expression; filamentous fungal cell; EST; expressed sequence tag; Fusarium venenatum; Aspergillus niger; Aspergillus oryzae; Trichoderma reesei; identification; recombination; culture condition; environmental stress; spore morphogenesis; metabolic pathway engineering; catabolic pathway engineering; ss.

At The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes in one or more second filamentous fungal cells. The method uses fluorescence—labeled nucleic acids isolated from the Fr cells and a substrate of expressed sequence tags (EST). The ESTS care used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring che global expression of genes from FF cells allows the production potential of the mcroorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be conditiced and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore adapt to changes in culture conditions, environmental stress, spore confineating. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an example of the results. AAFI1248 to AAFI1487 represents ESTS from Aspergillus or parents and satisficant and satisficant are confineating. AAFI1248 to AAFI1487 represents ESTS from AAFI4875 to Transpace and in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cytokine; cell proliferation; cell differentiation; gene therapy; acochie; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation; ss.
Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoicsis regulating activity, tissue growth factor activity, immunomodulatory activity and activity insue growth factor activity, immunomodulatory activity and activit/inhibin activity and may be useful in the diagnosis and/or the activity and activity and activity and activity and activity and activity and may be useful in the diagnosis and/or the activity and activ

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The colymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The color identifying expressed genes. (I) is useful in gene therapy techniques correstore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or guantitating a polypeptide in tissue, as molecular weight markers and as (II) and its binding partners are useful in medical imaging of sites expressing (II) and its binding partners are useful in medical imaging of sites expressing (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasorates, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cannon acid sequences. Ansoldly-Ansoldsely represent novel human classequences of the invention.

Consideration but was obtained in electronic format directly from WIPO considerations of the consideration of mutations of the consideration of mutations of the consideration of mutations of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; chromosome mapping; gene mapping; gene therapy; forensic;

polypeptide (II) sequences. (I) is useful as hybridisation probes, and polymersae chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to man application of mutations.
                                                                                                                                                                                                                                                                                                                                                                                                                       and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this putent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ŏ
                                                                                                                                         The invention relates to isolate polymorate (i) and the polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymorleotides are also used in disponsition as expressed sequence tags. for identifying expressed genes. (I) is useful in gene therapy techniques. (I) recombinant activity of (II) or useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful in medical imaging of sites expressing (II). (I) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in capponshible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences. Ass&4197.AAS&4564 represent novel human and dispensitic coding sequences of the invention of mutations captainted in the sequence data for this patent did not appear in the printed construction of the construction of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                                                  The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wlpo.int/pub/published_pct_sequences.
                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as
quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence date for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (III). The polymuclectides are also used in disapnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical
a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-051-2000; 02-05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; immune; haematopoietic; immune/haematopoietic antigen; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human immune/haematopoietic antigen genomic sequence SEQ ID NO:24352

amino acid sequences given in AAM81370 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
cample, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
cappression by rectifying mutations or deletions in a patient's genome
cut that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
colynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54921 co AAK54950 and AAM82169
represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; SEQ ID NO 24352; 3071pp + Sequence Listing; English.

                                                                                                                                                                                                                           involved in cell cycle regulation. In particular binding of E2F to the retinoblastoma gene product (PRD) causes down regulation of the transcription of any genes containing the E2F binding site. E2F-2 is useful in the study of cell cycle regulation especially in the study
                                                                                                                                                                                                AAQ86483 codes for the human transcription factor E2F-2. E2F-2 is
regulation and useful for drug screening, also related cDNA, plasmids and transformed cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Ososjawa K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Cataneso, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute

This insertion sequence is being submitted as H_NH0207G14_FI. Data from AC073088 was used to finish this clone, AC079586.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-31G7, 2000 bp overlap; the clone sequenced to the right is RP11-323P8. Actual start of this clone is at base position 140492 of RP11-31G7; actual end is at base position 140492 of RP11-31G7;
                                                                                                                                                                                                                                                                                                                                         Center code: WÜGSC
